

Our facilities use the latest state-of-the-art digital workstations and equipment to create the most creative soundtracks possible. Our facility is centered on Steinberg's world-renowned Nuendo 4 post audio platform, which is compatible with all of the latest picture and audio editing workstations including Digidesign's Pro Tools. Nuendo also integrates with all current file transfer protocols and popular VSTi plug ins from premium post audio manufacturers such as Waves, Cedar, Voxengo and many others.

Our mix systems are from the company that set the world standard in post audio mixing; Euphonix. A few years ago Euphonix and Steinberg teamed up to create a fully integrated mix system for the Nuendo 4 platform based on their successful System 5 console. The result was twofold, the Eucon protocol and the System 5 MC. ImagesInSound was proud to install the first System 5 MC in Canada. This robust system allows incredible creative flexibility during the final mix stage.
